INSTRUCTIONS

DISTRIBUTED BY INFOGRAMES UK

LOADING INSTRUCTIONS FOR CAPTAIN BLOOD

ATARI ST:

Insert Disk 1 and switch on your computer. Click on Disk 'A' and then move the pointer to 'FILE'. When the sub-menu is pulled down click on 'OPEN'. Move the pointer to 'BLOOD.TOS' and click twice. Insert Disk 2 when prompted.

AMIGA:

Switch on your computer. Follow usual procedure and, when asked for workbench, insert the game disk. Click on the icon 'BLOOD'.

SAVE TO DISK:

In CONTROL PANEL mode, insert an unprotected formatted disk into your drive. Click on the DISK icon when the onboard clock has passed 5 minutes. You cannot save a game during the first five minutes of play. The icon will flash for several moments if the save has aborted. In that case you should check your disk and try again. The saved file is called 'BLOOD.CPT'.

LOADING A SAVED GAME FROM DISK:

In CONTROL PANEL mode, insert your disk containing the saved file 'BLOOD.CPT'. Click on the DISK icon BEFORE the onboard clock has reached 5 minutes. You cannot load a saved game after five minutes of play.

Should you wish to load a save game after the five-minute time limit, you'll have to reset the computer and reload the program.

Only sneaky types and defective clones save the game after every action! You're neither of those, are you?

EXTERIOR VISION:

Simply click on this icon to switch from CONTROL PANEL mode to EXTERIOR VISION.

To come back from EXTERIOR VISION to CONTROL PANEL mode, click on any inactive button (eye).

GALACTIC MAP (CHOOSING A DESTINATION):

In CONTROL PANEL mode, click on the GALACTIC MAP icon to access a view of the HYDRA galaxy.

How to use the GALACTIC MAP:

First select your destination's X co-ordinate. You do this by clicking on the red vertical selection bar which you then drag onto the desired X co-ordinate. In the left window you can see the co-ordinates of Blood's finger. The right window displays the chosen co-ordinates (the co-ordinates for the point of intersection of the selection bars).

Next, select your destination's Y co-ordinate. You do this by clicking on the red horizontal selection bar which you then place on the Y co-ordinate position of your choice. As previously stated, the chosen destination co-ordinates are at the point where the two selection bars meet.

When you have chosen your destination co-ordinates, strap yourself in and click on the HYPERSPACE icon.

To speed up the HYPERSPACE sequence, click the right mouse-button at the beginning or during the sequence.

OORXX CONTACT MISSION (LANDING AND PILOTING THE OORXX)

In EXTERIOR VISION mode, click on the OORXX CONTACT MISSION icon. The OORXX is teleported and lands immediately. You then have total flight-control of the OORXX with your mouse. You can climb, dive and turn. You are advised not to fly into

mountains. If the planet has defence systems, you should fly as low as possible. When the OORXX is detected by the enemy, two red arrows will start to cross the screen towards each other. When they meet in centre-screen, the OORXX blows up. To avoid having your OORXX destroyed in this way, dive as far as you can, until the arrows disappear.

Life-forms in the Hydra galaxy have a weird habit of living at the very end of canyons. You'll have to find the canyons. The OORXX is equipped with a life-form detector which is a red aim symbol. It will follow the mouse's movement on the screen. When the detector flashes, that means you're flying the OORXX in the right direction. If an arrow shows up beside the detector, that means you must turn in the direction the arrow is pointing to get onto the right heading.

When a life-form is found at the end of a canyon, the OORXX is programmed to land immediately. If the planet is deserted, the OORXX will land, extremely exhausted. If you are currently transporting a being in the Ark's fridgitorium, the TELEPORT icon will activate so that you can teleport the being onto the planet if you want. To do so, just click on the TELEPORT icon.

At any time during the flight, you can request a photo of the fractal scenery around the OORXX. Simply press the SPACE bar on your keyboard. The OORXX will stop. To restart flying, press the SPACE bar again.

OORXX DESTROY MISSION (DESTRUCTION OF A PLANET):

In EXTERIOR VISION mode, you can teleport an OORXX onto a planet in order to destroy it. Just click on the OORXX DESTROY MISSION icon. The planet will be irretrievably zapped.

OORXX GEOPHOTO MISSION (SURFACE SCAN):

In EXTERIOR VISION mode, you can teleport an OORXX into low orbit to collect aerial pictures of the planet. A special detector

will indicate whether the planet is equipped with a defence system. To activate this mission, click on the OORXX GEOPHOTO MISSION icon, once for a medium altitude scan, and once again for a low altitude scan. To return to normal mode, click on the EXTERIOR VISION icon.

UPCOM MODULE (UNIVERSAL PROTOCOL OF COMMUNICATION):

Once contact has been established with a sentient life-form in a canyon or when a being has been teleported from the Ark's fridgitorium, the UPCOM comes on automatically.

The UPCOM is a system of communication using icons. The UPCOM uses a number of windows, which will each be described.

The dictionary window: at the bottom of the screen. This icon dictionary uses two sideways scrollings, one rapid (activated by clicking on a red elevator bar situated under the dictionary icon), the other slow (activated by placing Blood's finger over two red-striped boxes situated on either side of the dictionary icon).

By moving Blood's finger over the dictionary icon, you can read a simultaneous translation of the icon into human language. The translation window is just above the UPCOM.

The conversation windows: situated above the dictionary icon and separated by a central mouth.

a) the left hand window: reserved for the life-form you're communicating with. To translate his (or its) messages, move Blood's finger over them. As long as the central mouth is moving, the being hasn't finished saying what he wants to say. Click on the central mouth to read the next sentence. When the mouth stops moving, you can start sending your message.

It is possible to understand the sentences spoken by the being, if you learn his language. Each icon represents a specific speech-sound.

b) The right-hand window: reserved for your use. You can enter

your messages by clicking on the icons of your choice in the icon dictionary. A small cursor under that window may be moved in order to insert an icon. Simply click on it. A delete option is available - click on the arrow situated to the right under the window. To transmit your sentences, click on the central mouth.

You can teleport a being into the fridgitorium, if the being agrees: At that moment, the TELEPORT icon will be enabled. To teleport the life-form, click on the TELEPORT icon.

Your conversational partner can, for reasons best known to himself, break off the discussion at any time.

If you want to leave the UPCOM during a conversation, click on the triangle at the right of the screen, under the DELETE arrow.

TELEPORT:

This icon is used to teleport a being from the planet into the Ark's fridgitorium. The icon will not be enabled until a being with whom you are in conversation consents to be teleported. If the icon is enabled and if you want to teleport the life-form, just click on the icon.

DISINTEGRATE THE TELEPORTED BEING:

When a life-form is teleported to the fridgitorium, you can decide to destroy the life-form by disintegrating it. If it's one of the Numbers, Blood will recover some of his vital fluid and survive a little longer.

FRIDGITORIUM:

It's a cryonization container where teleported beings are conserved. The beings in question must give their consent because the teleport system uses psychic energy generated by the being's will, a little like hypnosis. For security reasons, living beings cannot be teleported into the Ark, so they must be cryonized and stocked in the fridgitorium. The fridgitorium has a disintegrate crematorium feature which you can use if you feel like it. This feature recovers vital fluid, and so Blood can use it on the Numbers. All other forms of vital

DISINTEGRATE TELEPORTED BEING:

This command disintegrates a living being cryogenized in the ARK's fridgitorium. If it's a NUMBER, then Blood will regenerate.

SAVE TO DISK:

Saves the current game or loads a previously saved game with all parameters intact.

TELEPORT:

Teleports a WILLING being into the Ark's fridgitorium or onto a planet, with the help of an OORXX. In the fridgitorium the beings are automatically cryogenized as a security measure.

EXTERIOR VISION:

Switches to planet-vision mode when the Ark is in a geostationary orbit.

GALAXY MAP:

Select your hyperspace warp destination here, before a hyperspace warp. Each planet has X/Y coordinates.

HYPERSPACE WARP:

Takes you to the planet preselected on the galaxy map.

C A P T A I N
B L O O D

OORXX CONTACT MISSION:

The OORXX is ejected in order to land on a planet surface and to free its automatic controls. The player may then pilot the OORXX from the ARK, but with direct OORXX-eye vision. If the planet is protected you'll have to fly low and find the canyon where the natives live. Arrows at the screen edge signal that the OORXX has been detected by a missile. When the arrows touch, that means the OORXX has taken a hit.

OORXX DESTROY MISSION:

The OORXX is ejected from the ARK in order to destroy a planet.

OORXX GEOPHOTO MISSION:

The OORXX is ejected from the ARK to take aerial photographs, and eventually to detect a planet's protection system.

SWITCH TO UPCOM MODULE:

The UPCOM (Universal Protocol COMMunication) module uses a system of icons. Clicking selected icons allows direct communication with other beings. The dictionary scrolls in two ways: a slow scroll activated by clicking on the three red bars at the bottom of each side of the screen, and a fast scroll, activated by clicking on the mobile bar at the bottom of the screen. The other being talks in the left-hand window, the player in the right-hand window. When the central mouth is moving, that means the other is talking: you click on the central mouth to regulate the flow of the incoming message. To send your message, build then send it from the right hand window by clicking on the immobilized central mouth.

fluid are unfortunately incompatible with Blood's organism.

NOTE: Pacemakers are automatically extracted before cremation, so there is no risk of explosion during the disintegration phase.

THE OORXX BIRTH RAMP:

The layer is incorporated into the Ark's structure, in the pram zone. This area is completely sterile, of course. The newly-laid baby OORXX are propelled onto the birth ramp immediately after a stress-free birth. The layer is able to lay endless numbers of babies.

TIME:

Onboard time is displayed on the clock, in Earthling minutes and seconds. The UPCOM takes account of the minutes only. 60.45 means 60 minutes and 45 seconds, which comes to HOUR 60 for the UPCOM.

The game is limited to 45 realtime hours.

THE ARK'S POSITION (X, Y):

This window indicates the X, Y co-ordinates of the Ark in the Hydra galaxy.

THE ? COMMAND

When the OORXX has already been placed on a planet, it may be reactivated, which saves you from having to pilot another through all those dangerous mountains.

When the Ark stops after a hyperspace jump, near a planet you've already visited, simply switch to CONTROL PANEL mode by clicking on a closed (disenabled) button. The ? command is then available and enabled. Click on it to reactivate the OORXX. You will inevitably catch up with the character you talked to the last time.

PLAYING HINTS:

CAPTAIN BLOOD's Ark stops near an inhabited planet at the start of the game. The HYDRA galaxy is biggish, boasting 32,768

inhabitable planets noted on the map. Not all of them actually have thinking life-forms living on them, so it's easy to get very lost and see nobody for millions of years. That's why it's a damned good idea to note down the precise co-ordinates of inhabited planets before plunging into the immensity of unknown space. That way, you can always get back to a familiar place. Ask any space jock: trusting your luck is a non-viable survival option.

The program recreates the galaxy each time you begin a game. That means that co-ordinates of inhabited planets are not valid from one game to the next.

Bear in mind that Blood is degenerating. Don't be surprised if his hand gets the shakes from time to time: it's normal. It's also a bad sign! HE MUST GET HIS VITAL FLUID BACK. That's the only way he can regenerate. To recover the vital fluid, Blood has to find the NUMBERS and disintegrate them in the Ark's fridgitorium.

This software explores a new concept, the BIO-GAME. The characters can evolve, be born, die, trade information and generally get on with their own independent lives. Strange things can happen: planets can appear or disappear overnight, the behaviour of matter is out of our control!

You can transport beings from one planet to another but you'll have to win their trust first. Study their behaviour closely, because knowing who you're dealing with can mean the difference between life and death.

A BRIEF GLOSSARY OF FAUNA IN HYDRA

TRICEPHALS : Very interesting genetically. These guys have three android heads, each of which is equipped with an amazing tongue.

SINOX : Hardworking and intelligent, the Sinox are the technology whizzkids of the galaxy.

ANTENNA : Simple creatures, the Antennas are really very friendly. Maybe too friendly.

TUBULARBRAINERS : The only race so far known to have tubular brains. Their intelligence is quite peculiar and difficult to grasp.

TROMPS : Inoffensive creatures, if somewhat stubborn. Their hair is highly prized as snuff by the Sinox.

ROBHEADS : In a far off age, Hydra was invaded by bionic armies of android combat-robots with orders to take charge for a few thousand years. When the Hydrans got fed up with them, things went hideously sour for the robots. A few decapitated units managed to keep some systems functioning. They are the Robheads. They're just robot heads with a few memory zones still working. Completely harmless, they just lie there. They can't even reproduce, unless some passing geneticist

KINGPAKS : Ridiculous creatures who smoke tromp tails (supposedly aphrodisiac) and eat pills. Not very smart. Rumour has it that they inspired the early Pac Man games.

IZWAL : Peaceful and generous beings. Look almost human. Very cultured. Masters of Science.

BUGGOL : Beings with a particular social behaviour, being obsessively democratic. All belong to YATANGA, which is the only political party around and whose one aim is to defend democracy as obsessively as possible. The President's term of office is not fixed. As soon as a BUGGOL attains a majority, he is elected.

Since all are eligible for high office, Presidents tend to change very frequently, sometimes every 5 minutes. At the time this story begins the BUGGOL remains on ROSKO. He can't be elected, owing to the shortage of electors. He would need two more votes to become President of planet ROSKO. An imposter (a YUKAS), who doesn't even live on ROSKO has got himself elected in a fixed election. ROSKO is now in political upheaval.

YUKAS : Belligerent and underhand characters. No class at all. Little is known of their customs.

CROOLIS : Separated into two distinct evolutionary branches: Vareux and Ulves. Each has always hated the other.

MIGRAX : As their name suggests, they are great travellers. Highly intelligent, they carry the news around the galaxy. Excellent negotiators. Their slyness is legendary.

ONDOYANTES : Originally from planet Ondoya, these are dream creatures. They appear beautiful to those whom they like, and ghastly to those they detest. This way, everyone knows where he stands.

NUMBERS : Blood's clones. There are 5 of them; Number 1, number 2, number 3, number 4 and that son of a bitch number 5 ...
